npm v6.2.2 downloads 36M  CI passing tested with  jest

React-PDF

Display PDFs in your React app as easily as if they were images.

Lost?

This package is used to *display* existing PDFs. If you wish to *create* PDFs using React, you may be looking for [@react-pdf/renderer](#).

tl;dr

- Install by executing `npm install react-pdf` or `yarn add react-pdf`.
- Import by adding `import { Document } from 'react-pdf'`.
- Use by adding `<Document file="..." />`. `file` can be a URL, base64 content, Uint8Array, and more.
- Put `<Page />` components inside `<Document />` to render pages.

Demo

A minimal demo page can be found in `sample` directory.

Online demo is also available!

Before you continue

React-PDF is under constant development. This documentation is written for React-PDF 6.x branch. If you want to see documentation for other versions of React-PDF, use dropdown on top of GitHub page to switch to an appropriate tag. Here are quick links to the newest docs from each branch:

- [v5.x](#)
- [v4.x](#)
- [v3.x](#)
- [v2.x](#)
- [v1.x](#)

Getting started

Compatibility

Browser support

React-PDF supports all modern browsers. It is tested with the latest versions of Chrome, Edge, Safari, Firefox, and Opera.

The following browsers are supported in React-PDF v6:

- Chrome ≥ 76
- Edge (Chromium-based)
- Safari ≥ 14.1
- Firefox $\geq 90(?)$

You may extend the list of supported browsers by providing additional polyfills (e.g. for `Promise.allSettled`) and configuring your bundler to transpile `pdfjs-dist`.

If you need to support older browsers, you will need to use React-PDF v5.
